Request: /collector-data

This endpoint allows you to send an HTTP POST request to /collector-data in order to collect data. The request should include a JSON payload with a "url" key.

request Body

- `url`: (string) The URL for which data needs to be collected.

Response

Upon a successful execution, the endpoint returns a JSON response with the following fields:

- `url`: The URL for which the data was collected.
- `length`: The length of the collected data.
- `data`: The collected data.
- `code`: The status code of the response.
- `status`: The status message of the response.

Example Response:

JSON
```
{
  "url": "",
  "length": 0,
  "data": "",
  "code": 0,
  "status": ""
}
```

Body Raw (json)

```json
{
    "url": "https://google.com/"

}
```
